PROFESSIONAL SUMMARY

Full-stack developer who has shipped software to paying clients and then kept it running. Owns the whole path — React 18 and TypeScript on the front, Fastify and Prisma behind it, in a single npm-workspaces monorepo — including the unglamorous parts that decide whether software is actually usable: 80mm thermal receipt printing, PDF generation, automated WhatsApp delivery and daily backups on a retention schedule. Delivered a company website end to end from build through deployment, and a TanStack Start studio site on Vercel. 2026 graduate.

SKILLS

Languages	TypeScript, JavaScript, Python, HTML/CSS, SQL
Frontend	React 18, Vite, TanStack Start / Router / Query, Tailwind CSS, Leaflet
Backend	Fastify (Node/TS), Express, FastAPI, REST API design
Data	Prisma, SQLite (WAL), PostgreSQL
Infrastructure	Docker, GitHub Actions CI, Vercel, npm workspaces (monorepo), Linux
Integration	Gemini API, third-party APIs (geocoding, weather, maps), PDF generation, WhatsApp automation

WORK EXPERIENCE

Web & Software Developer

Freelance | Salem, Tamil Nadu | Jun 2026 – Present

- Built and shipped a GST-compliant billing system for a photography studio, now in daily production for a paying client (see Maestro-Billing under Projects).
- Built and deployed a company website for an IT services client.

AI Developer Intern

Python and Ladder (Uraikathai) | Salem, Tamil Nadu | Jan 2026 – Jun 2026

- Built AI-assisted image and video generation pipelines using SDXL, img2img and ControlNet, running latent-diffusion workflows in ComfyUI on RunPod cloud GPUs.
- Contributed frontend development to the interactive fiction platform alongside the generative research work.

PROJECTS

Maestro-Billing — Production Billing System for a Paying Client

React 18 · Vite · Tailwind · Fastify · Prisma · SQLite (WAL) · npm workspaces

github.com/SenthilkumaranPSK/Maestro-billing

- Built and shipped a GST-compliant billing system for a photography studio in a single npm-workspaces monorepo — React 18 and Vite on the frontend, Fastify and Prisma behind it — now in daily production for a paying client.
- Implemented integer-based currency handling in paise with CGST/SGST whole-rupee reconciliation, preventing floating-point calculation errors.
- Delivered three output paths per bill: PDF invoices, 80mm ESC/POS thermal receipts and automatic WhatsApp delivery.
- Designed an append-only audit log excluding cancelled bills from revenue, and maintained the schema across 18 Prisma migrations with zero production data loss.

TravelGenie — AI Trip Planning Platform

Node.js · Express · React · Google Gemini · Leaflet · OpenStreetMap/Overpass · Nominatim · Vercel

github.com/SenthilkumaranPSK/AI-Smart-Travel-Agent

- Built and deployed a trip planner generating day-wise itineraries from destination, budget and travel style, with a context-aware chat assistant.
- Integrated live third-party services including weather, Nominatim geocoding and geolocation-based nearby venues via the Overpass API.
- Rendered interactive Leaflet maps with Google Maps handoff for turn-by-turn directions.

Industrial Mind OS — Document Intelligence Copilot

JavaScript · Groq llama-4-scout multimodal OCR · Confluence sync · multi-format ingestion

[github.com/SenthilkumaranPSK/Industrial-Mind-OS](#)

- Built a copilot for plant technicians that turns engineering manuals, blueprints and maintenance logs into queryable diagnostic guidance.
- Extracted valve labels, measurements and structural metadata from P&IDs and scanned drawings using multimodal OCR.
- Ingested PDF, DOCX, PPTX, CSV and image formats, and synced enterprise Confluence workspaces into a queryable index.

AUREXIS AI — Multi-Agent Personal Finance System

Python · FastAPI · React/Vite · Ollama (deepseek-v2) · scikit-learn · Docker · GitHub Actions

[github.com/SenthilkumaranPSK/AUREXIS_AI](#) · [aurexis-ai.vercel.app](#)

- Built a React and Vite frontend over a FastAPI backend, deployed to Vercel, presenting portfolio analysis and transaction monitoring.
- Implemented weighted risk scoring and time-series forecasting to evaluate financial stability, plus a scenario simulation module for testing hypothetical decisions.
- Ran entirely on local inference via Ollama, removing per-token API cost; containerised with Docker and shipped through GitHub Actions CI.
- Published as first author of seven: AUREXIS AI: A Cognitive AI-based System for Real-Time Financial Analysis and Decision Support, IJIRT, Vol. 12, Issue 12, pp.3521-3529, May 2026. [ijirt.org/article?manuscript=200876](#)

EDUCATION

B.Tech, Artificial Intelligence & Data Science

Dhirajlal Gandhi College of Technology | Salem, Tamil Nadu | May 2026

CGPA 7.85 / 10

ACHIEVEMENTS & CERTIFICATIONS

- Google Agentic AI Day 2025 Hackathon — shortlisted at national level.
- AI for Bharat — Certificate of Recognition for a GenAI content summariser built on Amazon Bedrock (AWS × Hack2Skill).
- Salem District-Level Forest Fire Prevention Hackathon — 2nd place, Tamil Nadu State Planning Commission.
- NPTEL Design Thinking: A Primer — IIT Madras (Elite, 2026).
